

# DevAll

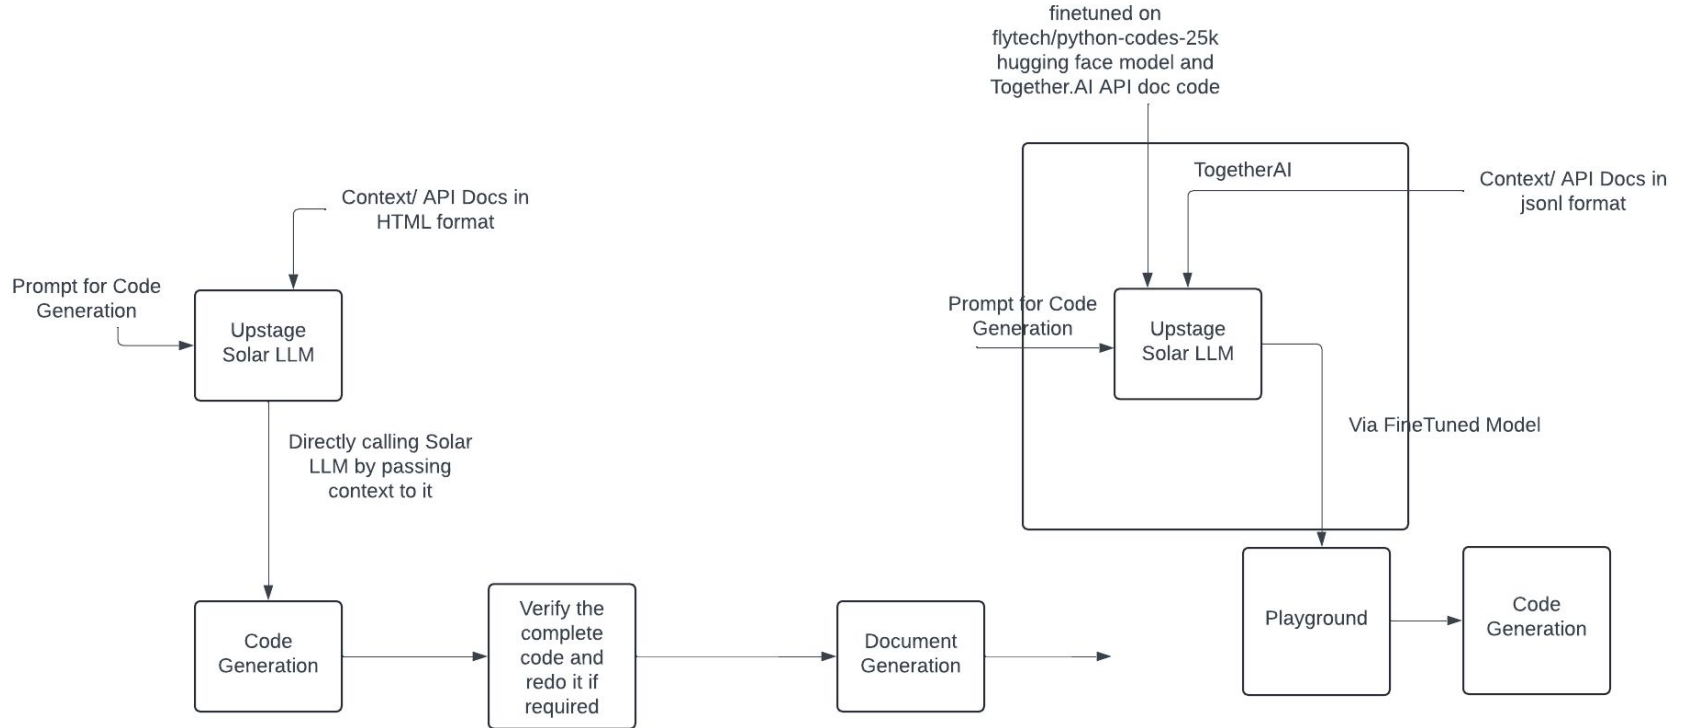

API code generation

Generate API calls in any language using Solar LLM which can be used by API developers to share with their clients like Swagger or Postman2.0

Chain APIs to start helping coders as Software Engineering Assistants.

The idea is going forward every one is a developer and everything is an API call away.

# Code Generation Flow

# Learnings

FineTuned Model is way faster than directly calling Solar LLM and is very promising.

Data quality is critical for fine tuning.

(have manually created data from Together AI's docs and Hugging face dataset: flytech/python-codes-25k)

Thank You!
